Emanuel Esquivel Lopez 2016133597

Pegunta 1

a)
$$f(x) = \frac{2^{0.2x}}{10}$$
 $\chi \in (0, 2)$ $S = \{0, 0.5, 1, 2\}$
Herror viene dado por $|f(x) - P(x)| \leq |f^{(4)}(x)| \cdot |p(x)|$

$$f'(x) = 0.013 e \qquad \text{Max } f'(x) = 0.00036 e \qquad = 4.67 \times 10^{-5}$$

$$f''(x) = 0.0019 e \qquad \qquad P(x) = (x-0)(x-0.5)(x-1)(x-2)$$

$$f''(x) = 0.00036 e \qquad P(x) = (x-0.5)(x-1)(x-2)$$

$$f''(x) = 0.00036 e \qquad P(x) = x (x-0.5)(x-1)(x-2)$$

$$f''(x) = 0.00036 e \qquad P(x) = x (x-0.5)(x-1)(x-2)$$

error =
$$(6-a)h^{2}|f''(\xi)| = 10^{-4}$$
 $m\acute{a}x f''(\xi) = f''(z) = 2.54 \times 10^{-3}$

$$= \frac{(2-0)h^{2} \cdot 2.154 \times 10^{3} = 10^{44} - \frac{h^{2}}{6} = \frac{10^{44}}{2.54 \times 10^{3}} - \frac{h^{2}}{6} = \frac{6 \cdot 10^{44}}{2.54 \times 10^{3}}$$

$$h = \sqrt{\frac{30}{127}} - \frac{1}{7} = \sqrt{\frac{30}{12$$

Pregunta 2

a)
$$\frac{dy}{dx} = x^2 - 3y$$
 $y(0) = 1$ $(0,0.4)$ $h=0.1$

$$y_{n+1} = y_n + 0.1 k_2$$
 $y_0 = 1$

$$K_2 = (x_0 + \frac{0.1}{2})^2 - 3 \cdot (y_0 + 0.1 \frac{K_1}{2})$$

$$y_1 = y_6 + 0.1 \text{ R}_2$$
 $(R_2 = (\frac{0.1}{2})^2 - 3.(1 + 0.1 \cdot -3)$

$$y_2 = y_1 + 0.1 k_2$$
 $k_2 = (0.1 + 0.05)^2 - 3(0.74525 + 0.05 - 2.22575)$
 $y_2 = 0.74525 + 0.1k_2 = 0.55731$

y (0,4) = 0,3244

b)
$$y_{k+1} = y_k + \frac{h}{2} [3f(x_k, y_k) - f(x_{k-1}, y_{k-1})] \{y_0 = 1\}$$
 $\{y_1 = 0.74525\}$
 $y_2 = y_1 + 0.05(3f(x_1, y_1) - f(x_0, y_0))\}$
 $y_2 = 0.74525 + 0.05[3 - 2.2575 - (-3)]$
 $y_2 = 0.5614$
 $y_3 = 0.5614 + 0.05[3 - 1.6942 - (-2.22575)]$
 $y_3 = 0.4260$
 $y_4 = 0.4260 + 0.05[3 - 1.88 - (-1.6442)]$
 $y_4 = 0.33601$

Pregunta	9
1 105 and	·

a) F A= (10 10) si calculamos los vectores propios de de

 $p(\lambda) = -\lambda^3 + 30\lambda^2 - 298\lambda + 980$ $\lambda_1 = 10 + \sqrt{2}$ $\lambda_2 = 10, \lambda_3 = 10 - \sqrt{2}$

Si adadames les vectores propies tenemes (0/1/2)/(-12)

construmes la matriz $\chi = \begin{pmatrix} 7 & 1 \\ 0 & \sqrt{2} & -\sqrt{2} \end{pmatrix}$

Doterminanto $(x) = -4\sqrt{2}$ como el determinante es $\neq 6$ Xes invertibe

? A no es defectuosa

b) F El metodo de la potencia inversa permite
calcular el MODULO del valor propio más
pequeño, para calclor el valor propio la matriz
debe ser simetrica definida positiva

si hacemas una toble
